AVOID GETTING INTO TROUBLE WHILE BUYING A SOLUTION

It creates many problems to use the Magnetic Tape Based Recording Systems (MTBRS), which is still being used by companies to find a solution in some recording system deployments. Although the manufacturers of MTBRS systems claim that this solution applies new technologies, as a matter of fact, it still uses degradable materials such as magnetic tapes, cassettes, cartidges and DATs systems for voice recordings. Consequently MTBS solution creates organizational inefficiencies with unnecessary costs and work load.

Well, what are the cons of this solution?

- High cost of MTBRS materials ☹️
- Personnel needs for loading cassettes and maintenance ☹️
- Storage space for cassettes ☹️
- Degrading quality of the voice records in time ☹️
- Waste of time and money to search a voice record from the archive and to convert it to the replay format ☹️
- More importantly, it is not possible to prove the originality of the records those are captured via MTBS ☹️
